</table>

*↑, ↓, and → indicate an increase, a decrease, and the same level, respectively, compared to the previous week.

*The positive rate is calculated mechanically with the number of new positive tests (including patients with pseudo-symptoms) based on the publication date in each prefecture as the numerator, and the number of PCR tests (including tests at discharge) as the denominator. The results may exceed 100% due to the influence of delay in reporting the number of PCR tests, and attention should be paid to the interpretation of the results in other prefectures as well.

</tbody>
</table>

* "Trends in the numbers of inpatients" are based on the "Surveillance of the Status of Care for Patients with the Novel Coronavirus Infection and the Number of Beds," by the Ministry of Health, Labour and Welfare. In this surveillance, the results as of 0:00 on the presentation date are published. ↑, ↓, and → indicate an increase, a decrease, and the same level, respectively, compared to the previous week.*
(1) No. of new cases of infection reported

(2) No. of new cases of infection (per 100,000 of the population)/Percentage of unlinked cases

(3) Test status

(4) No. of inpatients/No. of severe patients

(5) Use rate of beds

(6) No. of patients receiving treatment

* The numbers per 100,000 of the population were calculated based on the population estimates as of October 1 of each year by the Statistics Bureau of the Ministry of Internal Affairs and Communications up to December 4, 2021, and the National population census in 2020 from December 5, 2021.

(Source) ADB Material, dated March 30, 2022
