

## 21. Leprosy Research Center (Department of Mycobacteriology)

- 1) Ohtsuka M, N. Kikuchi, T. Yamamoto, T. Suzutani, K. Nakanaga, K. Suzuki, and N. Ishii. 2014. Buruli ulcer caused by *Mycobacterium ulcerans* subsp. *shinshuense*: The first case of familial concurrent occurrence and detection of IS2404 from the environment in Japan. *JAMA Dermatol* 150, 64-67.
- 2) Nagai H, M. Suzukawa, Y. Sakakibara, K. Ohta, Reche PA, K. Suzuki, and Y. Hoshino. 2014. Immunological responses and epitope mapping by tuberculosis-associated antigens within the RD1 region in Japanese patients. *J Immunol Res*, ID764028.
- 3) Suzuki K, A. Saso, K. Hoshino, J. Sakurai, K. Tanigawa, Y. Luo, Y. Ishido, S. Mori, K. Hirata, and N. Ishii. 2014. Paleopathological evidence and detection of *Mycobacterium leprae* DNA from archaeological skeletal remains of *Nabe-kaburi* (head-covered with iron pots) burials in Japan. *PLoS One* 9(2), e88356.
- 4) Matsumoto T, M. Suzuki, Y. Inuma, S. Maeda, H. Ano, Y. Koshi, T. Murakawa, K. Suzuki, and Y. Hoshino. 2014. A molecular typing methodology of *Mycobacterium tuberculosis* using small genomic islet patterns (TB-SGIP): a novel genotyping methodology to discriminate clinical strains between Beijing family and T3-OSAKA. *J Infect Dis Ther* 2:35-45.
- 5) Degang Y, K. Nakamura, T. Akama, Y. Ishido, Y. Luo, N. Ishii, and K. Suzuki. 2014. Leprosy as a model of immunity. *Future Microbiol* 9: 43-54.
- 6) Nakanaga K, T. Sekizuka, H. Fukano, Y. Sakakibara, F. Takeuchi, S. Wada, N. Ishii, M. Makino, M. Kuroda, and Y. Hoshino. 2014. Discrimination of *Mycobacterium abscessus* subsp. *massiliense* from *Mycobacterium abscessus* subsp. *abscessus* in clinical isolates by multiplex PCR. *J Clin Microbiol* 52: 251-259.
- 7) Tsukamoto Y, Y. Maeda, and M. Makino. 2014. Evaluation of major membrane protein-I as a serodiagnostic tool of pauci-bacillary leprosy. *Diagn. Microbiol. Infect. Dis.* 80: 62.
- 8) Sekizuka T, M. Kai, K. Nakanaga, N. Nakata, Y. Kazumi, S. Maeda, M. Makino, Y. Hoshino, and M. Kuroda. 2014. Comparative genome analysis of *Mycobacterium massiliense* JCM 15300 among *Mycobacterium abscessus* group reveals the potential pathogenicity related in subcutaneous tissue. *PLoS One*; doi:10.1371/journal.pone.0114848.
- 9) Miyamoto Y, M. Komine, Y. Takatsuka, T. Maekawa, S. Murata, K. Nakanaga, N. Ishii, and M. Ohtsuki. 2014. Two cases of Buruli ulcer in Japanese brothers. *J Dermatol* 41:771-772.
- 10) Duthie MS, RN. Coler, JD. Laurance, LH. Sampaio, RM. Oliveira, AL. Sousa, MM. Stefani, Y. Maeda, M. Matsuoka, M. Makino, and SG. Reed. 2014. Protection against *Mycobacterium leprae* infection by the ID83/GLA-SE and ID93/GLA-SE vaccines developed for tuberculosis. *Infect. Immun.* 82:3979-3985, doi: 10.1128/IAI.02145-14.
- 11) Sugawara M, N. Ishii, K. Nakanaga, K. Suzuki, Y. Umebayashi, K. Makigami, M. Aihara. 2015. Exploration of a standard treatment for Buruli ulcer through a comprehensive analysis of all Japanese cases. *J Dermatol* 42: 588-595.
